BimaCheck AI — Real-Time Insurance Verification

From voice conversation to trusted verification

THE PROBLEM

Trust breaks at the point of sale

Customers sign long-term products like pensions without fully knowing the premium, the term, or who gets paid. Manual verification calls are slow, inconsistent, and hard to audit.

OUR SOLUTION

A calm, bilingual verification call

A Hindi and Hinglish agent confirms identity, reads back the policy, then checks seven understanding points in four short turns. Every answer is compared with the policy record and ends in a clear verdict.

WHY IT IS DIFFERENT

The AI never decides

Most voice bots let the LLM judge. Here Gemini only interprets language. Python owns state, evidence, comparisons, and verdicts, so the model cannot pass a check or be talked into one.

GEMINI LISTENS

Understands Hindi and Hinglish, proposes spoken wording, suggests an interpretation. Its output is never evidence.

vs

PYTHON DECIDES

Owns the current question, check state, policy comparisons, discrepancies, safety rules, and the final verdict.

SEVEN CHECKS | FOUR TURNS | ONE VERDICT

TURN 1	TURN 2	TURN 3	TURN 4	VERDICT
Annual premium + Payment period	**Policy term** + Product type	**Payout recipient** + Pension timing	**Stopping premiums** lapse or reduced benefits	after all 7 checks

Wrong, unclear, or refused answers become discrepancies and the call moves on, so the customer is never stuck in a loop.

THREE CLEAR OUTCOMES

GREEN	**clear**	All checks passed
AMBER	**pending_review**	Discrepancy found
RED	**hold**	Refusal or sign-pressure risk

BUILT LIKE PRODUCTION SOFTWARE

153	7	0.4s	8s
tests passing	independent checks	turn merge window	Gemini timeout, no retry

Safe fallbacks on provider failure, deterministic Indian number and name matching, and turn-level latency logs.

DELIVERED

Complete voice agent on LiveKit, Gnani Prisma STT and Timbre TTS, Gemini language layer, deterministic evaluators, safety rules, and a full test suite.

NEXT

Database for call records, a backend API, and a reviewer dashboard for Amber and Red cases. The agent core is ready to plug in.
